Samsel, Ryan [redacted] Sex: M
Visit date: 6/28/2022

06/28/2022 - Office Visit in Jefferson Vascular Center - Center City (continued)

Progress Notes (continued)

[redacted]

Studies-
I reviewed some studies on paper that seem to indicate venous obstruction of left upper extremity outflow.

Assessment/Plan

Assessment/Plan

1. Nipple discharge in male (Primary)
2. Visit for screening mammogram
   - X-ray chest 2 views, frontal and lateral; Future; Expected date: 06/28/2022
   - Bl mammogram screening digital bilateral; Future; Expected date: 06/28/2022
   - Bl ultrasound breast complete left; Future; Expected date: 06/28/2022
3. Venous thoracic outlet syndrome of left subclavian vein

I feel that he needs to see Dr. Melissa Lazar for the nipple discharge. I have sent him to be evaluated. Once she assesses her breat situation, we can address the chronic left upper extremity venous throacic outlet syndrome.

I spent 60 minutes in direct patient contact or coordination of care. Of this time, greater than 50% was spent counseling and coordinating care.

Return in about 4 weeks (around 7/26/2022) for Obtain chest XR, mammogram and breast US. F/u w Dr. Melissa Lazar before returning to Dr. Abai.

Please do not hesitate to get in touch with me if you have any questions. Cell Phone Number: [redacted]
